

## Announcement

We are proud to may present **CASTOR** working with Windows 10!

Thanks to the new development tool from **Approximatrix** and many investigated time done by ASC we transformed Windows XP based sources for future use in the newest version of Windows

It is a fact that older approved software written for XP -use caused by Microsoft developments is not longer proper working using newer Windows versions. Thanks our effort we have a future safe version of **CASTOR** available as a test version with the same reliability as known from the past.

Further developments in making additional software able to run safe with Windows 10 will follow. For more questions and information, please contact us by mail.

For readers unfamiliar with CASTOR:

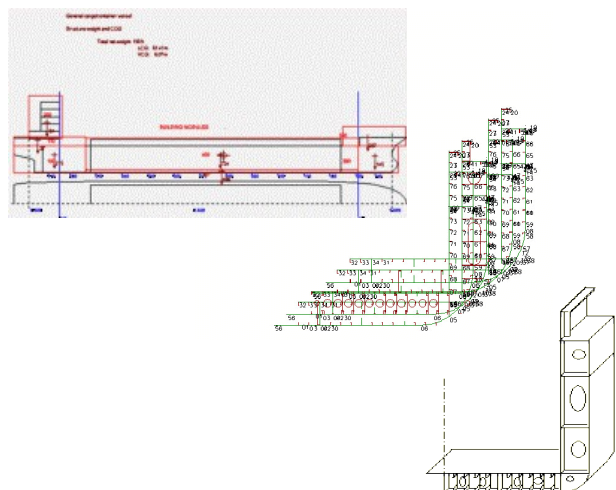

**CASTOR** is a indispensable tool for an very early and fast start of a structural design of various types of vessels saving efforts and building costs. The results are based on a structure model which can be generated in a couple of hours instead of day like other applications

It includes criteria checks as well as the most reliable weight calculation of the ships structure included cog's also subdivided in structure modules.

For more details and how it works see the handout on our website

<http://www.asmussolution.nl/EN/castor.pdf>

Conditional a free beta versions of **CASTOR12LT** is available
