

## Announcement of CASTOR12LT with ABC

We are proud to may present **CASTOR** including ABC!

Thanks to the development tool from **Approximatrix** and many investigated time done by ASC we transformed Windows XP based sources for future use in the newest version of Windows

Software written for XP -use is not longer proper working After installation of newer Windows versions. This is caused by Microsoft developments of there tools. Thanks our effort we have a future safe version of **CASTOR** available with the same reliability as known from the past.

Further developments in making additional software able to run safe with Windows 10 will follow. For more questions and information, please contact us by mail.

For readers unfamiliar with CASTOR:

**CASTOR** is a indispensable tool for a very early and fast start of a structural design of various types of vessels calculating weight, saving efforts and building costs.

The results are based on a structure model which can be generated in a couple of hours instead of days like other applications

It includes criteria checks as well as the most reliable weight calculation of the ships structure included cog's also subdivided in structure modules.

For more details and how it works see the handout on our website  
<http://www.asmussolution.nl/EN/castor.pdf>

Conditional a free beta versions of **CASTOR12LT** is available

Wat is ABC?

It stands for Activity Bases Costing

This is a unique tool we use to determine hours and costs for a structure defined by the Castor model

Developed by using
